

New White Paper Helps Companies Choose Sanitary Conveyor with the Biggest Bang for the Buck

OSHKOSH, Wis. (February 11, 2015) – Proper equipment sanitation and its related costs dominate the daily production routine in the food, beverage, and pharmaceutical industries. No company wants to gamble with consumer health, government regulations, or lost profits due to production delays, recalls, or plant shutdowns.

While the market is filled with suitable washdown and sanitary conveyors that transport products in a safe, clean manner, selecting the best conveyor for the application is critical. The wrong choice could be costly, especially in facilities that require hundreds or thousands of feet of conveyor.

Arrowhead Systems' white paper, "Create a Winning Situation with the Right Sanitary Conveyor," profiles the design features of sanitary conveyor and provides insight into how these features affect the following:

- Benefit the environment and the company's bottom line;
- Reduce labor and improve food safety;
- Safeguard against workplace hazards.

The information presented in the white paper helps companies determine which conveyor options quickly pay for themselves through reduced operating costs.

"Our customers often ask us for sanitary conveyor for their filling line projects. Sadly the word 'sanitary' means many different things to different customers," says Shawn Grant, Vice President of Sales and

Marketing for Arrowhead Systems. “Our white paper helps organizations better understand the varying levels of clean design ranging from simple washdown through approved sanitary construction.”
